

App Name — Shortlist & Research

Renaming the calorie + macro + AI-photo + workout tracker · July 2026

Brief: sleek & premium, short and trivial to say/spell, an **aim / progress / target** motif, catchy, and works in English + Spanish (es-PR). **Reality:** every pronounceable exact .com is already parked by domainers, so each name secures via a modifier domain ([name]app.com, get[name].com) — what actually matters for an app is a free App Store / Play name, which all names below have.

TOP 5 RECOMMENDATIONS

1	Arqo unique	<i>arco</i> = arc / bow → archery & aim . Bilingual-native (en + es-PR), premium, and App-Store-unique. The odd “q” is what makes it ownable. Top pick.	arqoapp.com getarqo.com
2	Strydo unique	<i>stride</i> → momentum / progress. Maximally unique (zero hits in Apple’s database), energetic, easy to say.	strydoapp.com getstrydo.com
3	Aimery	<i>aim</i> + “-ery”. Reads like a real premium brand — elegant and trivial to say (AY-mer-ee).	aimeryapp.com getaimery.com
4	Aimly	<i>aim</i> + “-ly”. Catchy, app-native, unmistakable meaning.	aimlyapp.com joinaimly.com
5	Apexo	<i>apex</i> → peak / target. Bold, premium, clear progress motif.	apexoapp.com getapexo.com

THE FULL 30 — all free as an App Store name; ● = verified maximally unique

Aim · arc · target

- Arqo ● Arqel ● Arqin ● Arqora ●
- Aimery Aimly Aimix Aimon Vaim
- Vaira Targo Sighto

Rise · peak · progress

- Apexo Ascio Asela Elevo Summio

- Cresto Riselo Rizely

Momentum · pace · stride

- Strydo ● Pacely Cadova Tempora

Premium abstract (pure, ownable sound)

- Nira Kova Veyo Lumio Orin Saro ●

ICON DIRECTION

A single **coral arc that sweeps upward and lands a dot on a point** — reading as a bow/arrow **and** a macro progress-ring at once. Animated: the arc draws itself on launch and the dot “arrives” with a soft settle. It evolves the existing coral-ring identity rather than discarding it — memorable, and unmistakably not “just another macros app.” Works for Arqo, Aimery, Aimly, and Apexo.

Method: ~90 coined candidates → filtered by Apple App Store search API (exact-name collisions removed; “unique” = zero keyword hits) and live DNS domain checks. **Not yet checked** (final step on the chosen name): Google Play, and a formal USPTO / EUIPO trademark search. Exact .com domains are parked for every pronounceable name — budget for a modifier domain or a later purchase.
